Highlights of Changes in 5.0.19.132

ID: 5778 Enhanced “Total Discount Maintenance” to “Discount Maintenance” which will apply the logic to Row Discount

We had changed the Total Discount Maintenance to become *Discount Maintenance*. You can now apply the discount types in front-end row discount (line discount) as well.

In front-end, select the item that you wish to give row discount, and then press Row Discount button, then you will see the discount types are there for you to choose and apply.

A screenshot of the "Item Discount" dialog box. It features input fields for "Percentage", "Amount", and "Discount". Below these is a checkbox labeled "Calculate Discount On Unit Price". A grid of buttons contains numerical values (10, 20, 30, 40, 50, 60), bank codes (CIMB, MBB, PBB), and numbers (2, 3, 4). A red rectangle highlights the bank codes and numbers section. To the right of this section is a green arrow button. At the bottom is a numeric keypad with buttons for digits 0-9, a decimal point, and "Backspace", "Cancel", and "OK" buttons. Below the keypad are two yellow buttons: "F1 - Display Item Cost" and "F2 - Display Minimum Selling Price".

Item Discount

Percentage :

Amount :

Discount :

☐ Calculate Discount On Unit Price

10	20	30
40	50	60
CIMB	MBB	PBB
2	3	4

7	8	9	Backspace
4	5	6	Cancel
1	2	3	OK
0	00	.	

F1 - Display Item Cost

F2 - Display Minimum Selling Price

ID: 5655 Support “Load Data Option” feature at Price Plan Maintenance

We added the *Load Data Option* in Price Plan Maintenance screen. In back-end, go to *Point of Sale > Maintenance > Price Plan Maintenance*.

On top of your menu bar, look for *Others > Load Data Option*.

You can set how many days of data you want to show every time when you open this screen. Suitable for those that had maintained a lot of price plan here to reduce the loading time when opening this screen.

ID: 5914 Enhanced Synchronization process for better performance when syncing item data

In order to increase the sync performance and also to avoid sync process timeout during sync item, item sync is now by batch instead of sync all items at 1 time.
